Introduction & Qualification Certificate

Introduction

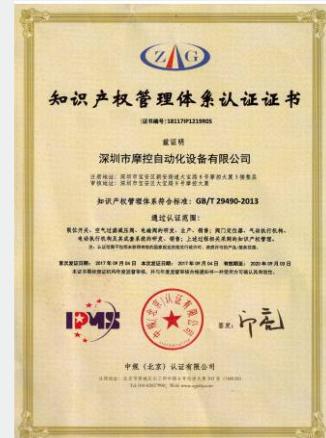

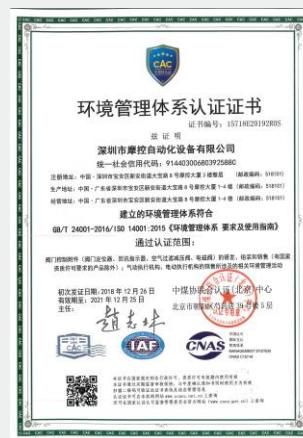

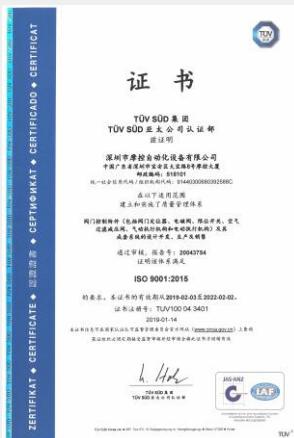

Shenzhen MORC Controls Co., Ltd. was established in October 2008, as Chinese High Technology and New Technology Enterprise and , it mainly engaged in the research, development ,production and sales of valve accessories. The company has gained ISO9001 quality management system and ISO14001 environmental management system certification, and successfully joined the HART Communications Foundation. The products have obtained CE, ATEX, NEPSI, SIL3 ,3C as well as other quality and safety certificates.

In June 2022, Anhui MORC Technology Co., Ltd. was officially put into production, with a total area of more than 10,000 square meters, which is the main production base of MORC products.

MORC product range involves in valve positioner, solenoid valve, limit switch, air filter regulator and Pneumatic /Electric Actuator, which are widely used in petrochemical, natural gas, metallurgy, power, new energy, paper-making, foodstuff, pharmaceutical, water treatment industries, aerospace industry,shipping and so on. We are also capable of providing complete set of control valve and on-off valve solution as we have a very close relationship with valve manufacturer.

With the rapid development of industrialization, automation and intelligence in the world, MORC will adhere to the development philosophy of "quality first, technology first, continuous improvement, customer satisfaction", provide customers with better products and services, and build MORC into world's leading valve accessories brand.

Qualification Certificate

Overview

The MTQ Series electric actuator is designed and manufactured by MORC Corporation High-performance products, can provide you with the most suitable in the field of valve automation reasonable solution. The MTQ series electric actuator has high performance, High protection, small size, high integration, long service life, stable performance Settings and other advantages. It can be operated on site or controlled at a long distance.compliant 90° rotating ball valve, butterfly valve, windshield valve panel and other suitable for 90° Rorating equipment can meet the needs of industrial automation control pipeline ask. Can be widely used in electric power, petroleum, chemical industry, metallurgy, water treatment, paper making, shipbuilding, building automation and other industries.

Characteristice

Basic Character

User interaction interface

Intelligent type is equipped with brand new UI control interface, with thespecialized remote control, achieves a variety of functions of the actuatorconfiguration operation. Supports multi-language, satisfies all kinds of demandsfrom the customer. It can also be customized based on special requirements.

Enrgy efficiency

Single-phase and DC power supply is optional, ultra-low energyconsumption, suitable for solar and wind powered applications.

360° position indicator

Adopts high strength, anti-sunlight and RoHS-compliant plastic 3D window indicator. Users are able to observe the stroke position of the actuator within the 360° visual angle as there's no dead angles.

Control mode

Non-invasive control

Non-through-the-shaft magnetic switch design, it is controlled by the Hall switch inside the actuator. Equipped with local control / remote control / disable knob, and on / off / stop button(knob), accommodating with the indicator light and LCD screen to achieve non-invasive fieldcontrol operations.

Infrared remote control

The intelligent type actuator is able to provide different remote control sets based on different application requirements. Such as portable infrared remote control in general places, and explosion-proof remote control for hazardous locations.

Patent mechanic design---Paving the way for future trend

MTQ series of electric actuators are equipped with manual / electric automatic switching function. No clutch design thus enables the hand wheel to be rotated while the machine is running; this is to ensure the safety of the operator. Such design will be the mainstream trend in the future.

Professional gear design

The adoption of the planetary gear design achieved a combination of manual and electric control without the need of the clutch which ensures the operator's safety. Above all, the unique solar planetary gear design has gotten the national patent.。

Interchangeable spline sleeve

Depending on the spindle of the valve, the output sleeve of the actuator is designed in spline form. The inner holes can be replaced into square holes and keyways and other different sizes. Fast debugging and replacing makes the operation more flexible.

Interchangeable connecting flange

The base connecting holes are in accordance with ISO 5211 standard, also with various connecting flange sizes. It can be replaced and rotated for the same type of actuators in order to achieve with different hole positions and angles of the valve flange connection purposes.

Planetary gears

Using high strength alloy steel for the planetary gear set, more compact and efficient, achieving greater output for the same volume. At the same time, having differential input for motor drive andhand wheel operation, we are therefore able to operate electrically and manually at the same time.

Sprocket operatio

Based on the features of operating manually and electrically without clutch mechanism, sprocket operation is more convenient to operate the valve at higher positions.

MTQ Series Quarter Turn Electric Actuator

Reliable & stable

Overload protection

The power will automatically shut off when the valve jam occurs. Thus preventing further damage to the valve and actuator.

Operational diagnosis

Intelligent actuators are equipped with multiple sensing devices. With the functions of real-time reflections of the control signal received by the actuator, fault alarm, operating parameters, status indication and other status. Multi-diagnostic function can locate the fault, thus making it easy for the users.

Password protection

Intelligent actuators possess classifiable password protection, which can be authorized to different operators to avoid misuse which causing the actuator failure.

Operational safety

F grade insulation motor. The motor winding has a temperature control switch to sense the temperature of the motor to protect the over heating issues, thus ensures the operational safety of the motor. (H grade optional). Installed with heater inside the actuator used to remove the internal condensation which cause damages to electrical parts.

Moisture resistance

Installed with heater inside the actuator used to remove the internal condensation which cause damages to electrical parts.

Phase sequence control

Phase detection and correction functions avoid the actuator being damaged by connecting to the wrong power supply.

Voltage protection

Protection against the high and low voltage situations.

Working environment

Anti-corrosion protection	Epoxy resin enclosure meets NEMA 4X, customer-special painting is available.
Ingress protection	IP67 is standard, IP68 is optional. The definition of IP68 is: Depth of water: Maximum 7 m under water level. Duration of continuous immersion in water : Max. 72 hours.
Fireproofing grade	High temperature fireproof enclosure meets requirements in different situation. It can be customized according to special needs.
Explosion proof rating	Ex d IIC T6 design and IECEEx, ATEX certifications which satisfy the requirements in hazardous locations.
Ambient temperature	Temperature range is from -25 °C to 70 °C
Ambient Humidity	≤ 95 % (at 25 °C) .

MTQ Series Quarter Turn Electric Actuator

Data monitoring & management

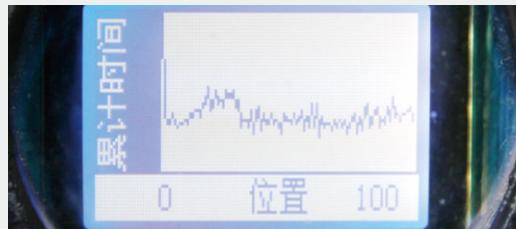

Super intelligent type actuators adopting high-performance microprocessors, real-time collection of valve position, torque and other operational information. Logical calculation truly reflects the operating status. Real-time monitoring & managing data provides references for the actuator maintenance.

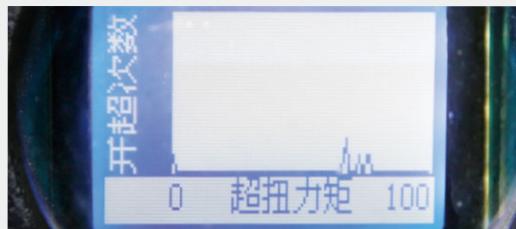

Average torque curve

It records the average output torques in the corresponding positions of both OPEN and CLOSE directions. The operating load of the actuator can be detected via the curve.

Time-position curve

The curve shows the running trend of the actuator, and the number of times the actuator has been passed at the corresponding positions.

Operation trend curve

The curve shows the cumulative number of positions corresponding to the control signal received by the actuator so far. It enables the clients to understand the overall controlling trend of the actuator.

Installation & maintenance

- MTQ350 and above models are equipped with lifting ring for easy handling and on-site installation construction.
- The mounting flange is in accordance with ISO 5211 international standard, and the replaceable spline sleeve makes the installation more flexible.
- The wiring cavity with double sealing structure can be selected, while the actuator is well sealed and protected when installed and debugged on site.
- a shrapnel terminal block, doesn't need to install a special wiring copper ring and can be directly connected. On-site installation is more convenient.
- Seal off lubrication design, without regular grease supplement, life-long maintenance-free.

MTQ Series Quarter Turn Electric Actuator

Technical specification							
General Parameters	Torque Range	On/Off Type: 35 - 20000 N.m; Modulating Type : 10 - 2000N.m; Intelligent Type : 100 - 2000N.m					
	Stroke Time	11 – 155 s					
	Ambient Temp.	-25 °C ... 70 °C , Optional : -40 °C ... 60 °C					
	Anti-vibration Level	JB/T8219					
	Noise Level	Less than 75 dB within 1 m					
	Electrical Interface	Two PG13.5 (< 100N.m) ,two PG16 ≥100N.m					
	Ingress Protection	IP67 , Optional:IP68					
	Connection Size	IS05211					
	Motor Specifications	<ul style="list-style-type: none"> ▪ Class F, with thermal protector up to +135 °C (+275 °F) Optional: Class H 					
	Working System	<ul style="list-style-type: none"> ▪ On-off Type: S2 ~ 15 min, no more than 600 times per hour start ▪ Modulating type: S4~50% up to 600 triggers per hour Optional: 1200 times per hour

MTQ2000							75×75		298	8- M20	369	220			

Note : 1. Dimension unit is mm.

2. Above "G" dimension is what we recommended. However, it can be customized according to customers' requirements.

3. Above "Φ I"and"J"dimensions are in accordance with ISO 5211 flange specifications. Which means that there's only one specification can be chosen, please specify when ordering.

MTM Series Multi-turn Electric Actuator

Overview

Multi-turn electric actuator is an actuator with an output angle greater than 360°. It is suitable for multi-turn motion or linear motion valves, such as gate valve, stop valve, regulating valve and other similar valves. It can also cooperate with 90° worm wheel reducer to drive Angle stroke valves such as butterfly valve, ball valve, plug valve and other similar valves.

MORC multi-rotary electric actuator is divided into two series: MTMS and MTMD according to the application environment, and the direct output torque of MTMS series is 35N.m~3000N.m, output speed in the range of 18rpm~192rpm; MTMD series can directly output the torque of 50N.m~900N.m, output speed in the range of 18rpm~144rpm. These two series of products are divided into three types, namely, basic types, intelligent integration and intelligent types.

The MORC multi-rotation series electric actuator has the characteristics of safety, stability and reliability, which can meet the applications in different fields, and the customized services can meet the various needs of users.

► MTMS Series Multi-Rotary Electric Actuator/explosion-proof / non-explosion-proof environment

Basic Type

Intelligent Type

► MTMD Series Multi-Rotary Electric Actuator/non-explosion-proof environment

Basic Type

Intelligent Type

MTM Series Multi-turn Electric Actuator

Characteristice

Operational safety

F grade insulation motor. The different positions of the motor windings are arranged with two thermal protectors to sense the temperature of motor. This marvelous design ensures the operational safety of the motor (H grade is optional).

Anti-humidity resistance

Installed with heater inside the actuator used to remove the internal condensation which cause damages to electrical parts.

Clutch handle

An ergonomically designed clutch handle is used to switch to the manual mode in the case of emergency or adjustment. Cooperating with the hand wheel, the clutch will disconnect from the motor drive to ensure personnel safety.

Infrared remote control

The intelligent type actuator is able to provide different remote control based on different application requirements. Such as portable infrared remote control in ordinary location and explosion-proof remote control for hazardous locations.

Multiloop absolute value encoder

Using a 24-bit multi-loop photoelectric absolute encoder, enabling position recording of no less than 1024 rpm, minimum resolution less than 0.1% (minimum resolution of MTM is 5°). The absolute value type design can ensure the accurate record of the valve position under the condition of power loss.

Worm gear set

The adoption of high-strength alloy steel worm and high wear-resistant characteristics worm gear made of copper alloy. For its characteristics developed a worm gear & worm meshing device, for each pair of worm gear & worm are tested to ensure maximum transmission torque efficiency after the installation.

High speed output

192 rpm can be achieved by all models in this series. Especially for the controlling of high speed valves and so on.

Non-invasive control

Non-through-the-shaft magnetic switch design, it is controlled by the Hall device inside the actuator. Equipped with local/off/remote knob, and open/stop/close button (knob), accommodating with the indicator light and LCD screen to achieve non-invasive field control operations.

High-performance microprocessor

The intelligent electric actuator uses high-performance microprocessor to collect the operation information such as valve position and torque in real time, and reflect the running state of the actuator, and monitor the management data in real time to provide reference for the maintenance of the actuator.

MTMS Series Multi-turn Electric Actuator

► MTMS Series General parameter

Anti-corrosion protection: Epoxy resin enclosure meets NEMA 4X, customer-special painting is available.

Ingress protection: IP67 is standard, IP68 is optional.

Fireproofing grade: High temperature fireproof enclosure meets requirements in different situations. It can be customized according to special needs.

Explosion-proof rating: Ex d IIC T6 design and IECEx, ATEX certifications which satisfy the requirements in hazardous locations.

Ambient temperature: Temperature range is from -25 °C to 70 °C

Ambient Humidity : ≤ 95 % (at 25 °C) .

Time position curve

The curve shows the running trend of the actuator, and the number of times the actuator has been passed at the corresponding positions.

Average torque curve:

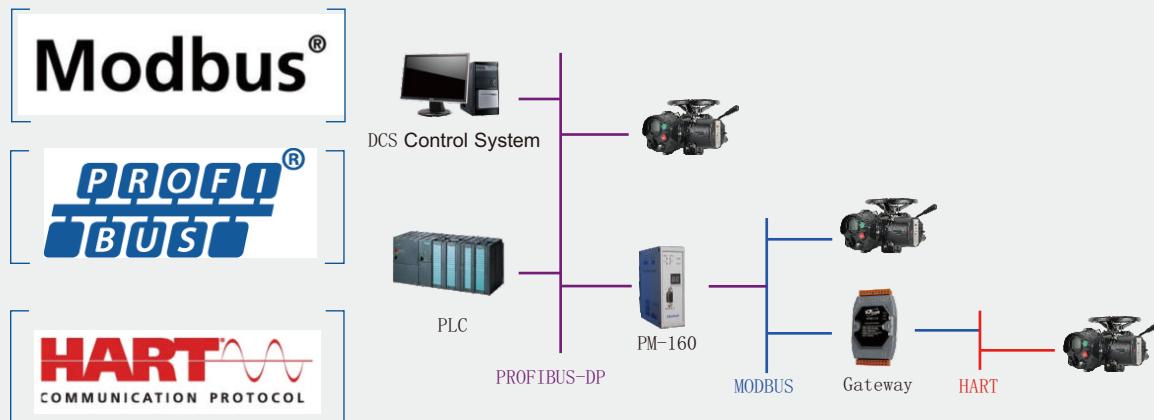

It records the average output torques in the corresponding positions of both OPEN and CLOSE directions. The operating load of the actuator can be detected via the curve.

Operation trend curve:

The curve shows the cumulative number of positions corresponding to the control signal received by the actuator so far. It enables the clients to understand the overall controlling trend of the actuator.

► Field-bus control function

The fieldbus control system of electric actuator is flexible and reliable, which has strong applicability and expansion function, and can effectively solve the problems of interference noise, control distance, contact capacity and working environment. The fieldbus control system is generally composed of the main control station, the communication loop and the field unit. The MTMS series multi-turn electric actuator currently supports optional communication protocols such as Modbus, Profibus-DP, HART and so on.

MTMS Series Multi-turn Electric Actuator

Parameters

Model		Basic Type	Intelligent Type(LCD)	Super Intelligent Type(SLCD)		
Torque Range		35-3000N.m				
Speed	50Hz	18、24、36、48、72rpm	18、24、36、48、72、96、144、192rpm			
	60Hz	21、29、43、57、86rpm	21、29、43、57、86、115、173、230rpm			
Ambient Temperature		▪ -30°C~70°C(-22OF~158OF) Optional: -40°C~60°C(-40OF~140OF) JB/T8219				
Noise Level		▪ Less than 75 dB within 1 m				
Electrical Interface		▪ Two NPT 3/4, One NPT1 1/2				
Ingress Protection		▪ IP67, Optional:IP68				
Connection Size		▪ ISO5210(Thrust type\ torque type)and JB2920(Three claw type)▪ N/A				
Motor Specifications		▪ Class F, with thermal protector up to +135				
Working System	On-Off	▪ On-off Type: S2 ~ 15 min, no more than 600 times per hour start				
	Modulating	—	S4 ~ 25 %, up to 600 triggers per hour			
Applicable Voltage		▪ 3 phase: AC 380 V (±10 %) /50/60 Hz (±5 %) 3 phase 3 wires ▪ Optional: 1 phase AC 220 V (1...3 series)				
Input	On-Off	▪ Built-in contacts for 5 A at 250 VAC (depending on the control box)	▪ AC/DC 24 input, AC 110/220 V input(optional) ▪ Optoelectronic isolation	▪ 20-60V AC/DC or 60-120V AC ▪ Optoelectronic isolation		
	Modulating	—	—	▪ Input signal: 4 ~ 20 mA; 0 ~ 10 V; 2 ~ 10 V ▪ Output impedance: ≤750 Ω (4 ~ 20 mA)		
Signal Feedback	On-Off	▪ Close the valve contact ▪ Open the valve contact ▪ Opening torque signal contact Closing torque signal contact	▪ Local/remote contacts ▪ Integrated fault contact (contact capacity: 5 A at 250 VAC) ▪ Opening torque signal contact ▪ Closing torque signal contact	▪ Relay X 5 (4 can be set to "natural open" or "natural closed" contacts. 1 integrated fault contact) A. Single or multi-phase power down B. Control circuit power failure C. Selection switch is in place or the stop position D. Motor temperature protector jumps off		
Malfunction Feedback	On-Off	▪ Motor overheating, over torque contacts	▪ Integrated fault alarm: Power off, motor overheating, Losing phase, over torque, lose signal,ESD, terminal output	▪ Jammed valve protection ▪ Lose signal protection ▪ Phase correction ▪ Thermal protection ▪ Instantaneous reverse protection ▪ Other alarms		
	Modulating	—	—	▪ Support Signal Reverse and Loss Signal ▪ Dead Zone:0 ~ 25.5 % adjustable rate within full stroke. ▪ Time lag: 0 ~ 25.5 s (adjustable)		
Indication		▪ Pointer type opening indicator plate	▪ LCD screen display Fully open/Fully close/remote/fault indicator(digital display of the opening percentage)	▪ 4-level grayscale LCD screen opening indicator, Fully open/Fully close/remote/fault indicator		

*Note: The single phase in the above applicable voltage is only applicable to the MTMS 1-3 series. If there are other voltage requirements, please contact our business personnel to provide customized services.

- Note: 1. Above torque is the maximum torque. Please contact us if in need of special torque or speed.
 2. Designed according to EN 15714-2009, Class A & B. The working time is S2 ~ 15 min.
 3. Products with a* means the speed inertia is larger. Therefore, directly driving the gate valves and other similar applications is not recommended. For multi-turn actuators with A-type lift nut connection mechanism, the maximum permissible shaft speed (output speed) must follow:
 A. The maximum for gate valve is 500 mm/min.
 B. For the cut-off valve is up to 250 mm/min (maximum 45 rpm).
 4. Modulating duty is available for option; the intermittent duty is S4 ~ 25 % and up to 600 starts per hour.

MTMD Series Multi-turn Electric Actuator

► MTMD Series Multi-turn Electric Actuator

Characteristice

1

The MTMD series multi-rotation electric actuators are designed for multi-rotation motion or linear motion of valves such as gates Application of valve, stop valve, regulating valve and other similar valves. It can also be matched with the worm gear reducer To drive the angle stroke valve such as butterfly valve, ball valve, cock valve and other similar valve applications.

2

The direct output torque of the MTMD series ranges from a wide range of 50N.m~900N.m, with an output speed of 18~144rpm, and the gearbox can output more torque to meet the torque requirements of various valve applications.

3

MORC multi-turn MTMD series, from the basic mining demand of the conventional standard type 15, the intelligent machine that can be used for configuration setting and intelligent feedback in the intelligent control project, Can both provide a suitable solution.

4

- Die-cast aluminum alloy enclosure
- Speed: 18-144 rpm
- High-cost-effective intelligent integration
- LCD display, without open cover debugging
- Full series of standard IP67 protection grade

MTQL Series Linear Stroke Electric Actuator

Overview

Direct stroke electric actuator is an actuator of output thrust drive valve rod for straight movement, which is suitable for valve rod for straight movement, such as single seat valve, stop valve and piston valve.

The output thrust range of MTQL straight electric actuator is 1000 N to 25000 N. MTQL series is divided into three types: basic, intelligent and super intelligent according to different functional configurations. With the characteristics of security, stability and reliability, it can meet the applications of different fields, and the customized services can meet the various needs of users.

Characteristics

Patent drive mechanism design

The MTQL01~08 series electric actuator has the patented hand / electric switching function. In the electric state, push the hand wheel forward at any time, the actuator automatically switches to the manual mode, the hand wheel will not rotate with the motor, to ensure personal safety. In the manual state, If you need to switch to electric drive, just pull the hand wheel back and switch to electric mode.

The MTQL10~25 series electric actuator has the hand / electric automatic switching function. No clutch design, in the product electric operation can also rotate the hand wheel, do not interfere with each other, so as to ensure the safety of the operator. This kind of design agency will become the mainstream trend of the industry in the future.

Professional gear design

The MTQL10~25 series actuator adopts planetary gear technology , realizing the combination of manual and electric control, and no clutch mechanism, to ensure the safety of operators. One of the unique planetary solar wheel technology has obtained the national patent.

Operational safety

F grade insulation motor. The different positions of the motor windings are arranged with two thermal protectors to sense the temperature of motor. This marvelous design ensures the operational safety of the motor (Hgrade is optional).

Anti-humidity resistance

Installed with heater inside the actuator used to remove the internal condensation which cause damages to electrical parts.

Phase protection

Phase detection and correction functions avoid the actuator being damaged by connecting to the wrong phase.

Voltage protection

.Protection against high and low voltage situations.

Overload protection

The power will automatically shut off when valve jam occurs. Thus preventing further damage to the valve and actuator.

Operational diagnosis

Intelligent actuators are equipped with multiple sensing devices. With the functions of real-time reflections of the control signal received by the actuator, fault alarm, operating parameters, status indication and other status. Multi-diagnostic function can locate the fault, thus making it easy for the users.

Password protection

Intelligent actuators possess classifiable password protection, which can be authorized to different operators to avoid misuse which causing the actuator failure.

Disc spring tightening mechanism

The output unit of the actuator is equipped with a two-way disc spring device, which has a certain pre-tightening force to effectively switch the valve for a long time and reduce the impact of the valve differential pressure instability on the actuator.

Interchangeable connection bolts

According to the different thread connection mode of the spindle of the valve, the connection bolts of the actuator can be designed for different thread connection specifications, which can be quickly replaced and easily operated.

User interaction interface

Intelligent type is equipped with brand new UI control interface, with the specialized remote control, achieves a variety of functions of the actuator configuration operation. Supports multi-language, satisfies all kinds of demands from the customer. It can also be customized based on special requirements.

Energy efficiency

Single-phase and DC power supply is optional, ultra-low energy consumption, suitable for solar and wind powered applications.

MTQL Series Linear Stroke Electric Actuator

Non-invasive control

Non-through-the-shaft magnetic switch design, it is controlled by the Hall switch inside the actuator. Equipped with local control / remote control / disable knob, and on / off / stop button (knob), accommodating with the indicator light and LCD screen to achieve non-invasive field control operations.

Screw nut assembly

Using the antirust screw of high strength alloy steel and the copper alloy nut with high wear resistance, each pair of screw nut is tested before installation to ensure the minimum clearance and maximum efficiency transfer torque after installation.

Average torque curve

It records the average output torques in the corresponding positions of both OPEN and CLOSE directions. The operating load of the actuator can be detected via the curve.

Working environment

Anti-corrosion protection Epoxy resin enclosure meets NEMA 4X, customer-special painting is available.

Ingress protection IP67 is standard, IP68 is optional. The definition of IP68 is: Depth of water: Maximum 7 m under water level. Duration of continuous immersion in water : Max. 72 hours.

Fireproofing grade High temperature fireproof enclosure meets requirements in different situation. It can be customized according to special needs.

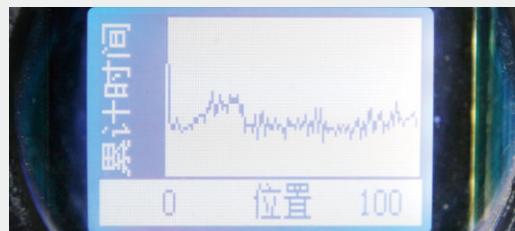

Clutch handle

An ergonomically designed clutch handle is used to switch to the manual mode in the case of emergency or adjustment. Cooperating with the hand wheel, the clutch will disconnect from the motor drive to ensure personnel safety.

Infrared remote control

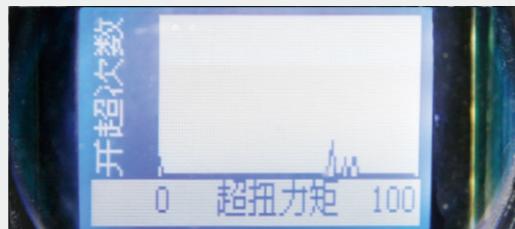

The intelligent type actuator is able to provide different remote control sets based on different application requirements. Such as portable infrared remote control in general places, and explosion-proof remote control for hazardous locations.

Super intelligent type actuators adopting high-performance microprocessors, real-time collection of valve position, torque and other operational information. Logical calculation truly reflects the operating status. Real-time monitoring & managing data provides references for the actuator maintenance.

Time-position curve

The curve shows the running trend of the actuator, and the number of times the actuator has been passed at the corresponding positions.

Operation trend curve

The curve shows the cumulative number of positions corresponding to the control signal received by the actuator so far. It enables the clients to understand the overall controlling trend of the actuator.

Explosion proof rating Ex d IIC T6 design and IECEx, ATEX certifications which satisfy the requirements in hazardous locations.

Ambient temperature Temperature range is from -25 °C to 70 °C

Ambient Humidity ≤ 95 % (at 25 °C).

MTQL Series Linear Stroke Electric Actuator

Parameters

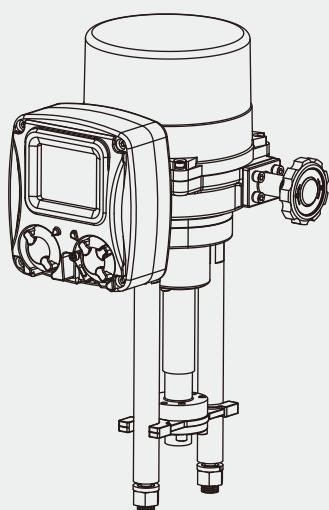

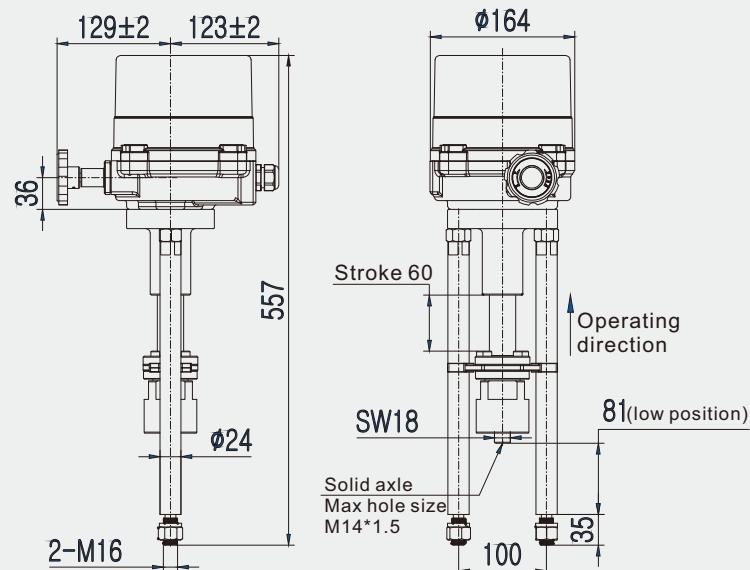

Model	Motor Power (W)	Max. Stroke (mm)	Max. force (N)	Stroke speed (s/mm)		Stroke speed (mm/s)		Remark	
				50 Hz	AC/DC 24V	50 Hz	AC/DC 24 V		
				AC 110 V AC 220 V		AC 110 V AC 220 V			
MTQL01	10	60	1000	0.83	0.64	1.20	1.56		
MTQL02	10	60	2000	0.83	0.64	1.20	1.56		
MTQL04	10	60	4000	1.58	1.23	0.63	0.81		
MTQL08	15	60	8000	2.04	1.58	0.49	0.63	Handwheel operation Manual/electric Switch mechanism,	

Note

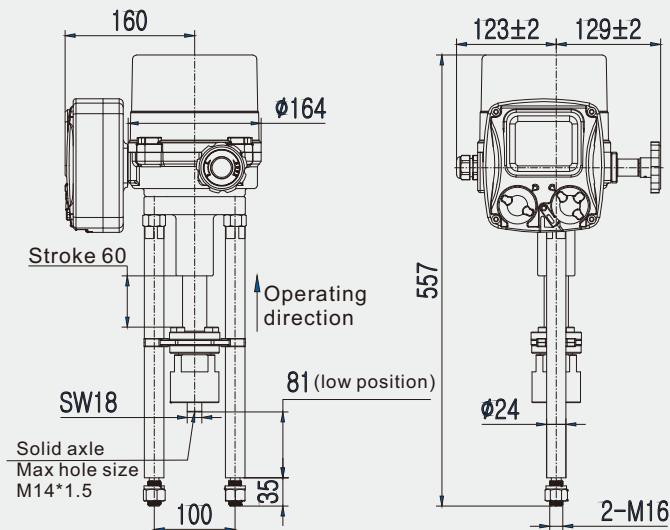

1. The rated output of the actuator is 0.75 times the maximum force.
2. The standard color is black. Please contact us for other colors.

MTQL08 Basic Type(10Kg)

MTQL08+LCD(12Kg)

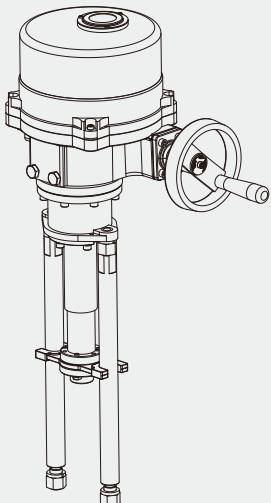

Note: Above connection size is the standard configuration. Please contact us for special connection methods.

MTQL Series Linear Stroke Electric Actuator

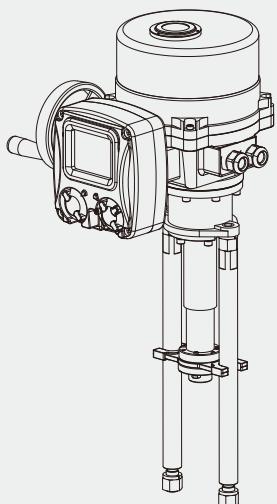

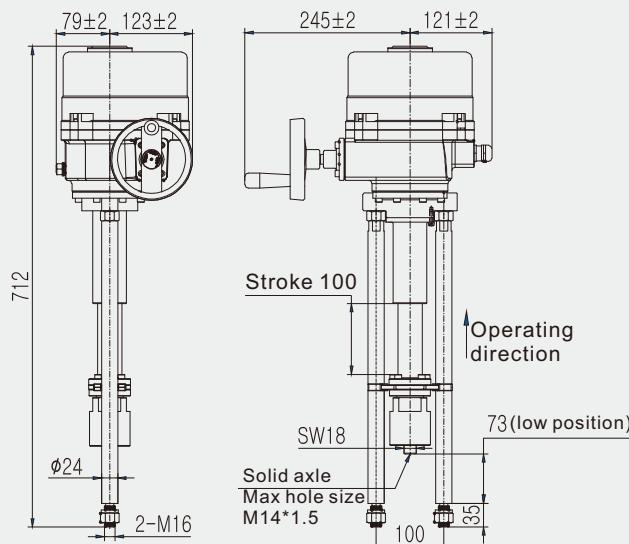

Model	Motor Power (W)	Max. Stroke (mm)	Max. force (N)	Stroke speed (s/mm)		Stroke speed (mm/s)		Remark
				50 Hz	AC 110 V AC 220 V	50 Hz	AC 110 V AC 220 V	
				AC/DC 24V		AC/DC 24 V		
MTQL10	40	100	10000	1.08	0.9	0.93	1.11	Handwheel operation
MTQL20	40	100	20000	1.79	1.49	0.56	0.67	Manual/electric
MTQL25	40	100	25000	1.79	1.49	0.56	0.67	Switch mechanism

Note

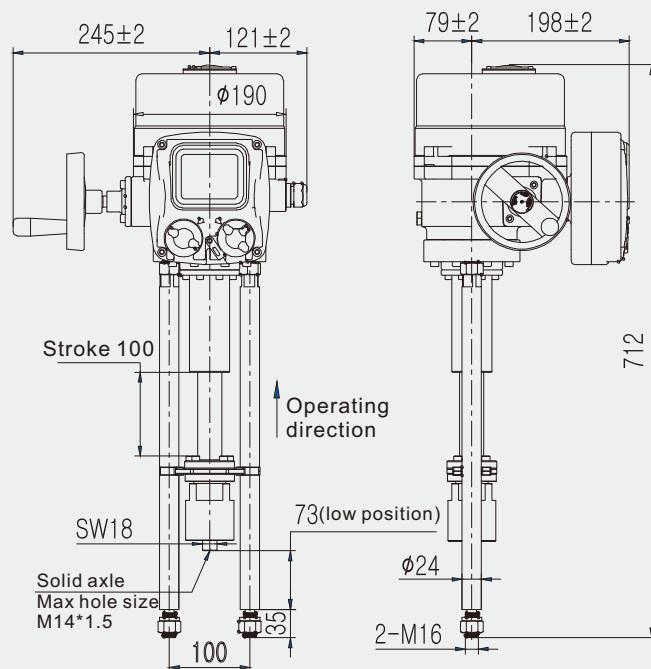

- The rated output of the actuator is 0.75 times the maximum force.
- The standard color is black. Please contact us for other colors.

MTQL25 Basic Type(16Kg)

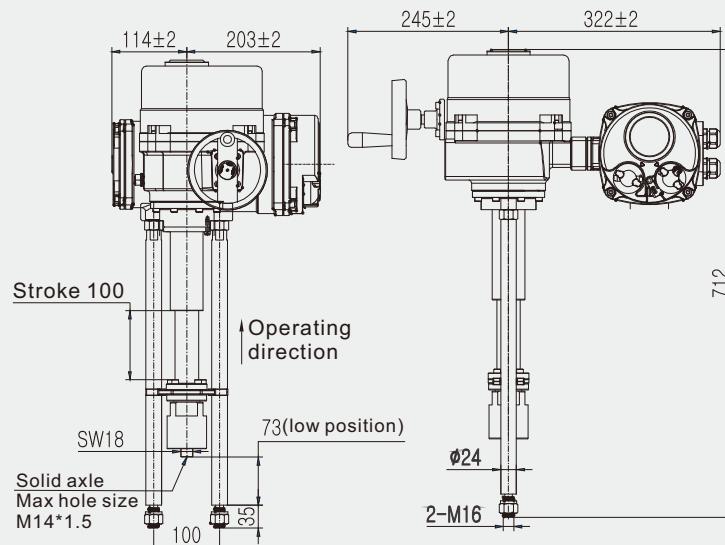

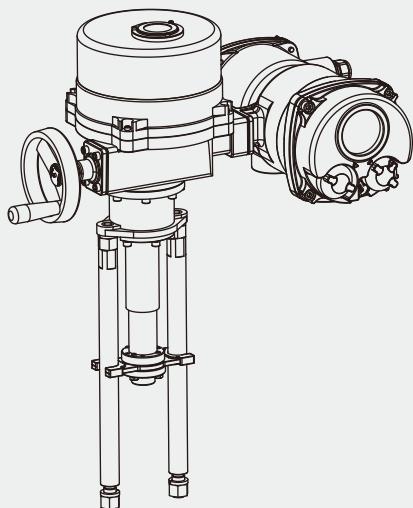

MTQL25+LCD(18Kg)

Note: Above connection size is the standard configuration. Please contact us for special connection methods.

MTQL Series Linear Stroke Electric Actuator

MTQL25+SLCD(23Kg)

Note: Above connection size is the standard configuration. Please contact us for special connection methods.

Model Code

MTQL [1] - [2] [3] [4] [5] - [6] [7] - [8]

[1] Force	[2] Voltage code	Ingress Protection	[4] EXPLOSION-PROOF	[5] AMBIENT TEMP.	[6] Control Mode
010:1KN	S : 220VAC/1PH	1 : IP67	1 : Non-Explosive	S: -20~70°C	K : On-Off
020:2KN	T : 380VAC/3PH	2 : IP68	2 : ExdIICT6	L: -40~80°C	T : Modulate
040:4KN	D : 24VDC		3 : ExdIIBT6	H:-20~120°C

250:25KN					

[7] Field Bus^[1]

- 0 : None
- H : HART
- M : Modbus
- P : Profibus-DP

[8] Optional

- 0 : None (Basic Type)
- 1 : LCU (Local control unit)
- 2 : LCD (Intelligente Type)
- 3 : SLCD (Supper Intelligente Type)

[1] : HART Only for Modulate Type.

MORC Controls Ltd.

Add: MORC Building, No.8 Dabao Road, Baoan, Shenzhen, China

Tel.: +86-755-26977701/03/04/05/06/07

Fax: +86-755-26977702/10

Email: info@morc.com.cn

Our vision

Be the world leading brand and successful valve accessories company.

Our Mission

Deliver superior service to our customer and pursue growth through improved and high-quality product; always strive to exceed our customers' expectations; manage our business with integrity.

General industry

Chemical

Oil & Gas

Pulp & Paper

Food & Pharmaceutical

HVAC & Water system

Petrochemical & Refining

Metals and Mining

MORC can supply not only reliable products to ensure extended service life, but experienced technical support and unmatched after sales service.
